4R Nutrient Management

**Right Source**
Apply the right nutrients based on what the crop needs to grow.

**Right Time**
Apply nutrients when the crop needs it – as the crop starts to grow and after it is harvested to replenish the soil.

**Right Rate**
Apply the correct amount of nutrients that the crop needs to grow - not too much, not too little.

**Right Place**
Apply nutrients in the right place so more nutrients are used by the crop and soils, and less are lost to the environment.

A farmer follows 4 R’s when applying nutrients:
